INTERNATIONAL ONLINE EXHIBITION
BASED ON REUSABLE FABRIC

OUR VISION

We started our journey with a thought to take along those peoples who are doing something to save the earth. We humans are creating a lot of garbage, which is causing a lot of damage to nature. From now on, we have to work on the policy of zero waste. we have to bring minimalism and sustainability in our life. Art is a tool that has many techniques and creates lot of ways in which an artist can bring this vision in their work which can inspires others. Let's start a new trend with ECO AWARE ART GALLERY, We will make our artwork from old , waste recycle and found materials. We will not harm nature for work. At Eco aware art gallery, We are convinced that our Gallery will bring Transparency and Equity to the Zero Waste Art World. Eco Aware Team will try to convey the message DON'T USE AND THROW, JUST USE AND GROW around the Globe. Artists should use waste and recycle materials in their Artwork As Far As Possible. ECO Aware Art Gallery concerns itself with ecological activism and highlighting the issues related to nature. Our vision is how as an artist, we can help environment with our work, because an artist gives a message to the society without saying anything from his artwork. Our motto is not just REDUCE, REUSE AND RECYCLE, but to create zero waste is our priority, our planet is finite and thus resources are finite. So being in a creative field, we have a double responsibility to be aware and do the rest. So we have started this gallery in which every event exhibition will be related to Eco Awareness. Artwork made of waste, found and recycled materials will be promoted and exhibited. We were thrilled to see responses from all over the world when we announced our first exhibition on October 2020 "Waste To Create". We get more then 800 plus applications from all over the world and we selected 151 artists from 46 countries around the globe .All the beautiful works was made by waste recycled and found materials we gave our artists the Title of ECO WARRIORS. Now with the same idea we are announcing the 2nd International online art exhibition "DISPOSE TO REUSE" where artwork must be created by textile waste like fabric waste and old clothes. As an artist who focuses much of their time on conservation and the betterment of the environment, we find it surprising how much waste an artist produces unintentionally! From the empty paint tubes, to the plastic covering canvases, to colored pencil shavings, to the fabric scraps there is so much waste our vision is being aware of the natural environment and making choices that benefit the earth, rather than hurt it. Some of the ways to practice environmental awareness include: using safe and non-toxic building supplies, conserving energy and water, recycling, activism, and others. The single most important thing that environmental awareness does is to inform people of the dangers of continuing to consume as much as we currently do. This is because people need a good understanding of the threats to our earth, to fully realize the scale of harm. Consequently, awareness is all about topics like environmental health, sustainable development and global warming. . Therefore, you as a person should look to reduce your carbon footprint, and there are a number of ways to do this Going paperless, Recycling, use solar energy for electrical appliances, do not use any kind of plastic things, so no to crackers, buy less, Small things add-up very quickly, and the more of these things you do, the less carbon dioxide you are producing. The news headlines may not fill you with hope, but don't let that discourage you. Even if you make a small change in your life, you are helping a lot to our planet. Since the late 20th century, we have depended on plastic as an affordable, versatile and durable material. However, since the majority of plastic materials take centuries to degrade, all of the plastic that has been sent to landfills in the India still exists — and yet we're still producing and consuming more of it. That plastic has to go somewhere, and it's frequently either dumped carelessly on land or in rivers in developing countries, before ending up in the ocean, where it threatens marine life. The fact is, we simply can't cope with the amount of plastic on our planet— or the amount that continues to be produced. For this reason, our attitudes and behaviors towards plastic must change to ensure a safe and healthy future for our planet. In 2050 plastic will cover the 90% area in our planet ,75% wild life is finished in the last 50 year, it's not that much late if we just start from small things we all can recover the damage done to the earth. So with this gallery we totally support and promote the work made by waste materials because our priority is save our planet.

REMEMBER THERE IS NO PLANET B

INTERNATIONAL ONLINE EXHIBITION
